

Cyberoam announces Enhancements to UTM Solutions

Cyberoam, a division of Elitecore, has announced notable enhancements to its innovative identity-based Unified Threat Management (UTM) solutions, including "Always ON" VPN connectivity for IPSec Road Warrior and L2TP connections, Child Internet Protection Act (CIPA) compliance policy templates, and

increased control over Instant Messaging (IM) protocols. Together, these advanced features enable enterprises to not only maximize their security strategy, but also increase business productivity and mobility without draining IT and financial resources.

Cyberoam's identity-based solutions provide a complete range of security features, including identity-based firewall, VPN, gateway antivirus, gateway anti-spam, intrusion detection and prevention, content filtering, as well as bandwidth management and multiple link management – all over a single platform. Coupled with these latest enhancements, Cyberoam's solutions address enterprise-market demands to protect dynamic networks against known and emerging internal and external threats, without having to concentrate on increased capital and operating expenses on single end-point solutions.

"Cyberoam's identity-based appliances provide a practical solution for a broad range of organizations – from schools looking to meet CIPA compliance to the emerging small-to-medium enterprises striving to meet a host of security challenges," said Frank Cieri, President of Micros Northeast. "After more than 20 years of experience in the reseller industry, I can attest that Cyberoam's unique ability to control individual user activity on the network provides my customers with what they need to keep both their networks and their bottom line secure."

"Organizations of all sizes across broad vertical markets are facing the challenge of addressing increasing security and compliance demands – all while staying within the limits of the IT budget," says Abhilash Sonwane, Vice-President of Product Management, Cyberoam. "With that in mind, Cyberoam is dedicated to providing our customers and channel partners with innovative integrated solutions that secure even the most dynamic networks, and with these latest enhancements, boost productivity, mobility and compliance."
